

TRIPWIRE VULNERABILITY AND RISK MANAGEMENT SOLUTIONS

PRIORITIZE YOUR VULNERABILITY RISKS

◆ Tripwire's proactive vulnerability management solutions discover comprehensive endpoint and network intelligence and apply advanced analytics to prioritize vulnerabilities—flagging the greatest risks so security teams can make quick, quality decisions within a rapidly changing threat landscape. ◆

Vulnerability management is the current evolution from early vulnerability assessment systems that labored to find vulnerabilities, which created reams of data for IT teams to wade through. Today's threat environment is unimaginably different, with thousands of new vulnerabilities reported annually. The sheer volume of launched attacks demands best-in-class vulnerability management solutions that deliver comprehensive discovery to support the entire vulnerability management lifecycle.

Up-to-date vulnerability management is critical, especially as the time between vulnerability discovery and the release of an exploit is, in some cases, narrowing to zero. Evolving technology constantly increases attack vectors into enterprises, and unmanageable numbers of vulnerabilities and required patches means that continuous monitoring and remediation is crucial to achieve enterprise security.

Tripwire's proactive vulnerability management solutions discover comprehensive endpoint and network intelligence and apply advanced analytics to prioritize vulnerabilities—flagging the greatest risks so security teams can make quick, quality decisions within a rapidly changing threat landscape.

COMPLETE COVERAGE FOR ENTERPRISE NETWORKS

Tripwire's vulnerability management solutions deliver:

- » Industry-leading discovery of all network assets including hosts, applications, web applications, services, vulnerabilities and configurations
- » Objective risk metrics and automated reporting to measure network security risk and track progress over time
- » Customer-designated asset values to place security risk in the context of the business
- » Scalability to the largest networks in the world
- » Integration with existing IT systems for maximum coverage and minimal operational disruption
- » Deployment at customer location, as a cloud-based service, or in combination, for maximum flexibility and value

Vulnerability	CVSS Score	Tripwire Granular Risk Scoring
Mso8-067: Microsoft Windows Server Service RPC Handling Code Execution Vulnerability	10	25117
WIND RIVER VXWORK WDB Agent: Debug Service Remote Access Breach	10	17174
Apple Mac OS X Net-SNMP Remote Authentication Bypass Vulnerability	10	2941
MS11-004: Microsoft IIS Service Heap Buffer Overrun Vulnerability	10	930
CESA-2008:0890 Wireshark Buffer Overflow	10	118
IBM WebSphere Application Server JSP Unspecified Vulnerability	10	0

◆ **FIG. 1** Network and host-level asset values provide prioritization within the context of business value, function, geography and business unit.

EXCLUSIVE VULNERABILITY COVERAGE GUARANTEE

Tripwire provides the most timely vulnerability intelligence through the company's Vulnerability and Exposure Research Team (VERT), dedicating world-class security and vulnerability researchers, a state-of-the-art lab and unwavering attention to the changing threat environment. Tripwire VERT identifies emerging vulnerabilities and creates unique detection signatures that are constantly updated in Tripwire vulnerability and risk management solutions—delivering unprecedented vulnerability discovery coverage.

VERT protects Tripwire customers with an exclusive 24-hour Microsoft Security Advisory Service Level Agreement. The Tripwire guarantee: Within 24 hours of a Microsoft advisory, Tripwire IP360 is updated with the signatures to find those vulnerabilities. This guarantee is unique in the industry.

◆ Tripwire is a leading global provider of risk-based security and compliance management solutions that enable organizations to effectively connect security to the business. Tripwire delivers foundational security controls like security configuration management, file integrity monitoring, log and event management, vulnerability management, and security business intelligence with performance reporting and visualization. ◆
